

Cone Beam 3D Imaging: Much, Much More than “50 Shades of Gray!”

Dale A. Miles BA, DDS, MS, FRCD(C)

Dip. American Board of Oral and Maxillofacial Radiology, Dip. American Board of Oral Medicine

Why all the “buzz” about Cone Beam Imaging?

We use x-ray imaging every day in our office to help our clinical treatment decisions. Now the most amazing, cost-effective modality– **Cone Beam Imaging** – is simply explained by Dr. Miles. What are the advantages? What are the risks of missing something in the scan? How should I review all the images?

Come see these incredible images and learn how to treat your patients more efficiently, expertly and confidently using this technology.

Objectives: this program will enable the dentist to:

- Understand the principles of CBCT
- View and understand the wide variety of applications
- View cases involving implants, TMJ, third molar impactions and root canal assessment
- Manage any risk of using CBCT

This is a summary overview of CBCT imaging.

A 2 ½ day mini-residency program is also offered by Dr. Miles.
