

Interpreting your CBCT Scan – Reporting and Documenting Findings to Minimize Risk!

Dale A. Miles BA, DDS, MS, FRCD(C)
Diplomate, ABOMR and ABOM

As clinicians who adopted CBCT, you are thrilled with the data for helping you make better clinical decisions. Have you considered the potential liabilities by using CBCT? Do you know what you are seeing in the regions you capture? Do you know what you might be missing?

Using real cases, this course outlines the potential legal pitfalls of using CBCT presents steps to help you minimize your potential liability. Participants will review cases using a radiology reporting and decision support software, **EasyRiter®**, which can help them examine their scans, reduce their risk and create a simple but detailed report for their patient and their office records.

Objectives

Upon completion of this course, the participant will be able to:

1. recognize the significant abnormalities in various anatomic regions captured in a CBCT volume that must be referred
2. understand how to review their CBCT volumes systematically and accurately
3. understand the concept of informed consent and informed refusal as they apply to CBCT scans

Note: participants will receive a 30-day trial of the **EasyRiter®** reporting and decision support software after using it for the course.
